

LITE + AUTO / V1

Stars Clique Sync

Time lyrics line by line. Review by ear. Export to TTML or LRC.

A Stars Clique project

Developed by Mikhail Mikhalchenko (Goth Angel)

t.me/starsclique

Time lyrics by hand

The manual workflow is available in both editions.

01 Load the track

In **In**, choose an audio file. Paste one lyric phrase per line. In Auto, choose **Manual**. Select **Continue**.

02 Hold Space on the phrase

Press **Play**. Hold **Space** when the highlighted phrase starts and release it when the phrase ends. The next line moves to the top of the list.

03 Replay and correct

Click the waveform to seek. In Lite, selecting an untimed line starts playback at the previous timed line's end. Click outside a text field before using keyboard shortcuts.

Esc

Select a line

Enter
Replay the line

Review and export

Choose the starting point that matches what you already have.

LITE

Import existing timing

In **In**, add your audio and use **Import LRC / TTML for edit**. Select **Continue** to open Edit with the imported timing.

AUTO

Recognize or align

Choose **English**, **Russian**, or **Auto** under **Language hint**. Select **Recognize from audio** or paste your own lyrics. Choose the **Auto** timing mode and select **Continue**.

CHECK THE AUTO DRAFT BY EAR

Whisper can miss, confuse, or invent words and shift timestamps. Dense mixes and effects make singing harder to recognize. The first run may download the model.

Make the final pass

In **Edit**, correct the text and the **Start** and **End** times in seconds. In Lite, use **Split** or **Reset** and retime with Space. In Auto, use **Match timing** to resume manual timing at the selected line. Select **Save** to open **Out**.

TTML	Text with a start and end time per line
LRC	Text with line start times
JSON	Project data for inspection or integration
